

## Changes in CandleSymbol class in dxFeed API

To: FOREX charting data subscribers

### Changes

When subscribing to FOREX candles using a dxFeed API, you need to specify attributes explicitly: {price=bid}, {price=ask} or {price=mark} for the bid price, ask price and mark price candles correspondingly.

The dxFeed API now has a temporary solution that allows to skip attributes and still receive bid price candles in this case. This temporary solution will be disabled and attributes for FOREX candles will be required.

### Come into effect

On January 13, 2018 the temporary solution that allows to receive bid candles with no attribute will be disabled. If you are subscribed to FOREX symbols but have not specified any attributes, please reset your connection with proper attributes by that date.

Please contact [support@dxfeed.com](mailto:support@dxfeed.com) if you have any questions concerning FOREX charting data.
