

dxFeed C and C# API 5.3.2 Release Notes

API Changes

dxFeed C API version 5.3.2 and dxFeed C# API version 5.3.2 with improvements are already available at our [website](#).

C API Changelog

- Added the ability to subscribe to regional quotes using the existing **regional book** functionality and the new listener `dxfeed_regional_quote_listener_t` with the new functions: `dxfeed_attach_regional_book_listener_v2` and `dxfeed_detach_regional_book_listener_v2`.

C# API Changelog

- Added **regional book** functionality (already available in dxFeed C API) that allows to get updates on regional quotes and price levels based on all available regional quotes (as opposed to full order depth). To learn how to use this functionality, check the `dxfeed_regional_book_sample`.

Please contact support@dxfeed.com if you have any questions.
