

SIFMA and FIA Industry-Wide BC and DR testing participation 2022

Overview

On **Saturday, October 15th, 2022**, dxFeed will participate in SIFMA's annual Industry-Wide Business Continuity (BC) Test and FIA's Disaster Recovery (DR) Test.

SIFMA and FIA organize these events to test if the industry is able to operate while suffering a significant emergency. This also tests the tools used during these emergencies including backup sites, recovery facilities, and backup communications capabilities.

Customers planning to participate in these tests must:

- Register with SIFMA and/or FIA accordingly
- Notify dxFeed **by October 7th**

Participation and testing are optional and done voluntarily.

Technical Details

During the test, customers will continue to connect to their usual feed endpoints used in production. dxFeed will redirect connections over Disaster Recovery (DR) paths and circuits internally. Customers are encouraged to use their Business Continuity Plan (BCP), DR datacenters, and secondary network providers and circuits to test for possible firewall and routing issues when connecting to dxFeed endpoints.

dxFeed will perform DR exercises by connecting to multiple participating exchanges and sources and internal DR sites. The data produced by the exchanges during SIFMA and FIA tests won't be distributed outside of internal dxFeed facilities to dxFeed customers.
